

Quality, Safety and Environmental Policy

TS Constructions places a great deal of value on delivering products and services that meet and exceed customer requirements, protect the safety of the individual, and minimise or eliminate any detrimental effects on the environment.

Accordingly, we are committed to the development, and ongoing maintenance of our own Quality, Safety and Environmental Management Systems which conform to the standards ISO9001: 2008 (Quality), AS 4801 (Safety) and ISO14001 (Environmental Management).

The company participates in a process continual improvement with emphasis on compliance to standards, legislation, customer and contractual obligations and improving the effectiveness of the quality management system.

In addition, we are committed to professional development the variety of fields, including construction techniques, environmental management and business development. This is incorporated into the day-to-day operations of the business. TS constructions have an established framework of performance measurement and meetings in which statistics are gathered, analysed and performance is measured against objectives and actions taken to meet those objectives.

Our Quality, Safety and Environmental policy is communicated throughout the organisation via our various meetings e.g. Toolbox Meetings, Inductions and management meetings. Detailed policies are available to all relevant stakeholders internal and external through our website, through our Site Safety Manuals and on display in our main reception area.

Policy reviews are conducted annually in which all relevant stakeholders are invited to participate.
